Claims

I claim:

	1.	A lockable key comprising
5		a handle,
		a flange,
		a shaft,
		a first spring,
		a second spring, and
10	•	two depressible balls,
		wherein
		said handle is connected to the top of said flange,
		said shaft is connected to the bottom of said flange,
		said shaft provides two lateral appendages,
15		said first spring is coiled around said shaft between said flange and said two lateral
		appendages,
		said shaft terminates in a tapered region,
		said tapered region provides apertures through which said depressible balls depend
		and said second spring is mounted internal to said shaft and acts to push said
20		depressible balls outwardly through said apertures.

- 2. The lockable key of claim 1 further comprising a wedge member operative to push said depressible balls outwardly through said apertures.
- 5 3: The lockable key of claim 2 wherein the wedge member is a third depressible ball.
 - 4. The lockable key of claim 1 wherein the tapered region has a flat end.
- 5. The lockable key of claim 4 wherein the flat end is removable for an application of a lubricant.
 - 6. The lockable key of claim 5 wherein the flat end provides a slot operative to allow a screwdriver to be used to adjust the flat end.
- 7. The lockable key of claim 4 wherein the flat end provides a hole for the application of a lubricant.
